“The DNS server isn’t responding” After Multiple Attempts to Fix
2019/12/26

Hello all,I’m going to post this as my options are starting to run low. I use a Razer Blade Stealth (Early 2017, 7200U) as my main computer, and recently I have been having issues with the Internet. The wireless card is a Killer Wireless 1535 Network Adapter. It runs normally for a few seconds to a few minutes, but begins to act choppy and it eventually stops loading for long periods of time before working for a few seconds again, then not working for a long period, and so on. Windows does not drop my connection or say that there is no internet. I have tried to fix my issue based on the usual error coming up, “The DNS server isn’t responding” (and similar), using the methods listed below:1) Setting DNS to be set automatically for IPv4 and IPv62) Using Google’s DNS or Cloudflare’s DNS instead (both IPv4 and IPv6)3) Reinstalling the drivers4) Installing bare wireless drivers from Killer’s page5) Resetting my PC entirely6) Flushing the DNS7) Trying all methods on Microsoft’s Event ID 1014 page (found in Event Viewer)8) Setting my device’s IP to be static and not dynamic9) Resetting my router/modem’s settings to factory defaultNone of the above methods have worked. Any help would be greatly appreciated. (Note that the internet works fine as far as I can tell on a different network or on my hotspot, so it might be the modem/router combo somehow).Thanks in advance!

buy a cell phone jammer in the united states
